

FOR IMMEDIATE RELEASE:

**Global Vision to Attend DIA 44th Annual Meeting
Global Vision's text and artwork verification tools ensure the accuracy of all critical documents**

Montreal, Quebec. May 18th, 2008. -- Global Vision, the leader in automated proofreading solutions for the pharmaceutical industry will be demonstrating its automated proofreading solutions at DIA's (Drug Information Association) Annual Meeting from June 22-26, 2008. Global Vision will be showcasing the latest version of Docu-Proof at booth #1844.

"Our solutions are designed to deliver peace of mind and accuracy for all of our customers' critical documents. Keeping track of changes and ensuring the accuracy of all these components is an extremely difficult task, especially with changing regulations, the participation of numerous individuals and departments, and quality control checks," said Reuben Malz, President of Global Vision. "By taking the proper precautions to secure their workflow, our customers are able to ensure their documents are safe and that all changes have been tracked and traced".

Docu-Proof, a text verification tool, detects all changes in documents regardless of layout or format. It includes the inspection of foreign language characters and even Braille. It allows the user to ensure complete precision when reviewing and publishing critical documents. Docu-Proof dramatically eases the challenges that professionals face on a daily basis when trying to manage change controls and ensure the accuracy of packaging components, contracts, and publications. Detailed accountability is attainable with its extensive reporting feature that documents all changes, thereby ensuring the accuracy of all materials.

With the recent European mandate for Braille on medical packaging, Global Vision has also integrated Braille inspection capabilities into all its solutions. All systems meet FDA 21 CFR Part 11 and EMEA requirements.

About Global Vision

Global Vision provides automated proofreading solutions that enable organizations to achieve unprecedented content integrity. Companies from around the world rely on Global Vision to help them reduce the risk of textual or artwork errors from occurring throughout their workflow. Headquartered in Montreal, Canada, Global Vision has worldwide representation.

Global Vision led the migration from manual proofreading to automation – gaining an unmatched reputation for vision and technology along the way. For over a decade, Global Vision has helped clients increase inspection accuracy, speed, productivity, and process efficiencies. More information is available at www.globalvisioninc.com
