Customer Stories

Read what others have to say about how GlobalVision has increased proofreading accuracy, inspection speed, productivity, and overall quality and led the way for a more efficient print and packaging approval process.

"The task of detecting artwork errors isn't nearly as difficult as it once was."

"What was especially eye-catching were the results after conducting a few head-to-head, human-versus-electronic proofing tests—with GlobalVision far and away the clear winner."

"What I like most is the speed we can get with this new quality-control process, along with the confidence that nothing has changed. Before we were walking away from the desk to check the proof manually. Now it is done automatically."

"GlobalVision allowed our users to focus on more important parts of the inspection such as the actual formatting of the labels instead of tedious inspections."
